Solutions

Reporting section

give a wide range of reports leveraging different business department's , Easy & flexible interface provide different printing and reviewing requirement's with ability to further edit and customization, you can have your reports routed to desired section in reporting screen for different department's

Auditing

give you a full control over your business through designing audit policy at three levels (user, department& task), further more you can enforce operation audit so and modification is described by user in mini report, finally edited items always have a mirror copy for different last versions to get closer look at modifications applied

PERFECTION

EXTRAORDINARY managing your business

• in simple mode you can have transparent manufacturing, you just use your product , the stock is deducted by quantities of sub products

• you can simply specify a product as raw material and another product as manufactured, with such option you can specify raw materials used to manufacture this product through selecting product and determine used quantity in it's unit

• for cost calculation, your different selected raw materials are calculated according to it's cost with ability to add extra indirect fees

• the produced product will have it's unique characteristics (coding, uniting, concluded cost)& can be used as standard product or re-manufactured once more   to produce more complicated product

• for advanced manufacturing you have the complete control over manufacturing plant which include batches, exec order & quality management

• simply you start a new batch , select the product needed to be manufacturing , automatically system detect raw materials needed and add them

• batch have direct cost through raw materials used, and indirect cost which can be added to the batch or calculated through accounting module

• product sub materials are predefined by you through product profile, you can define multiple sub material with designated units to be used in process

• fully customized, yet flexible production line management, you are the one to determine your product life cycle   in complicated production environment

• production line management controlling not only production execution, fully manage resources through defining process, man power, machinery power, materials which provide complete control over production time, resources and cost

• products can goes through quality assurance step or just be stocked

• manufacturing products can be recycled to raw materials in case of exitance, which take same strategy in reversed order

• manufacturing is originally a subsection of products warehouse so you have one site inventory, adding , reducing , transferring ..etc. all with originals

MANUFACTURING SECTOR
SOLUTION

manage simple material transformation
or mutli phase manufacturing process
